Good afternoon....early one today as I need to head out before the close (all prices as of 3:30pm ET). **QQQs -9bps** after climbing out of another AI-financing scare this morning (down as much as -1.1%): Korea's KOSPI fell -3.7% overnight as neocloud Elice closed 32% below its IPO price on day one (*MK* in TMTB Slack here: *"I'm baffled on headlines every where that AI trade is dead based on some Korean 550 million market cap small cap..."*), SoftBank's CDS hit a four-year high and CRWV made new 52-week lows.

> 下午好……今天早些时候发文，因为我需要在收盘前离开（所有价格截至美东时间下午 3:30）。QQQ 在今早走出又一场 AI 融资恐慌后下跌 9 个基点（此前一度下跌 1.1%）：韩国综合股价指数（KOSPI）隔夜下跌 3.7%，原因是新型云服务商 Elice 在上市首日收盘价较 IPO 发行价破发 32%（TMTB Slack 群组里的 MK 对此表示：“我感到很困惑，到处都是基于一家市值仅 5.5 亿美元的韩国小盘股就断言 AI 交易已死的头条新闻……”），软银的信用违约互换（CDS）触及四年高点，CRWV 则创下 52 周新低。

The market turned on reports around 9:15am ET that the US and Iran had backed a Qatar/Pakistan compromise proposal, plus a weak pending home sales print that pulled yields lower, with small caps leading (**IWM +1.7%**). Breadth flipped from yesterday's narrow bounce (~70% of the S&P down) to ~85% of S&P stocks up by late morning. **Semis +31bps** came back from -2.4% at the lows, neoclouds and optics reversing hardest (**CRWV +2.5%; MRVL +2%; COHR +20bps; CRDO +39bps**, off lows of -4.5% to -7%), while semicap lagged (**LRCX -2.6%; KLAC -2%; AMAT -1.6%**) and **TSEM -7%** sank on a SemiAnalysis note. **Software +1%** led tech, with app software ripping as CRM agreed to buy BRZE at a 58% premium (**MNDY +7.6%; FIG +6%; HUBS +7%; BILL +6.6%**). **SE -9%** the main laggard again on its cloud foray and **META -2.3%** into tomorrow's print.

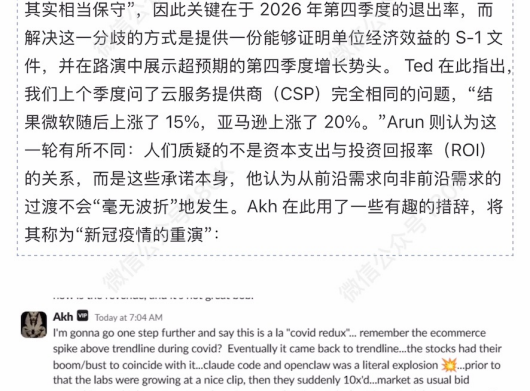
> 市场在东部时间上午 9:15 左右出现转机，当时有报道称美国和伊朗支持卡塔尔/巴基斯坦的折中提案，加之疲软的成屋待完成销售数据拉低了收益率，小盘股领涨（IWM +1.7%）。市场广度从昨日的窄幅反弹（标普 500 指数约 70% 的成分股下跌）转变为截至上午晚些时候 ~85% 的标普成分股上涨。半导体板块收涨 31 个基点，从 -2.4% 的低点回升，新型云服务商和光通信板块反弹最强（CRWV +2.5%；MRVL +2%；COHR +20 个基点；CRDO +39 个基点，从 -4.5% 至 -7% 的低点回升），而半导体设备板块表现落后（LRCX -2.6%；KLAC -2%；AMAT -1.6%），TSEM 因 SemiAnalysis 的一份报告下跌 7%。软件板块上涨 1% 领跑科技股，应用软件板块在 CRM 同意以 58% 的溢价收购 BRZE 后大幅飙升（MNDY +7.6%；FIG +6%；HUBS +7%；BILL +6.6%）。SE 因进军云业务再次成为主要落后者，下跌 9%；META 在明日发布财报前下跌 2.3%。

The drivers & debates at the center of the AI semis trade (financing, power supply, labs ARR, frontier vs. open source) continue to be the focus of conversations this week. We've spent the past week modeling Anthropic out given the details we received last week, and the lower Q3 ARR raised a handful of questions we hadn't thought about enough, ones we suspect a lot of investors are grappling with as well and will be thinking about as the S-1 comes out (we're working on a longer post). A lot of good back and forth in #anthropic-ipo in Slack on the topic, which we'll recap below:

> AI 半导体交易的核心驱动因素和争论点（融资、电力供应、实验室年度经常性收入 (ARR)、前沿模型 vs. 开源模型）本周继续成为对话的焦点。过去一周，我们根据上周收到的细节对 Anthropic 进行了建模，其第三季度较低的 ARR 引发了一些我们此前思考不足的问题，我们怀疑许多投资者也在努力应对这些问题，并会在 S-1 文件发布时予以考虑（我们正在撰写一篇更长的文章）。Slack 的 #anthropic-ipo 频道中关于该话题有很多精彩的讨论，我们将在下文进行总结：

OJ here: backing out large customers and distillation from the disclosures, *OJ* gets only ~$5.5B of net new ARR in Aug/Sep, which makes the $100-110B year-end target look *"completely fanciful,"* with maybe ~$120B of FY27 revenue, nowhere near the $190-200B FY28 targets floating around in August. *Arun Dhar* here framed it with compute expects: 40GW of incremental compute next year, ~20GW on average through the year, means ~$280-320B of revenue for the compute providers, and with consensus converging on ~$200B of FY27 revenue for OpenAI + Anthropic (~$120B incremental), ~$180B has to come from everyone else (GOOGL, META, AMZN/MSFT's own workloads, other model providers, enterprise AI) at zero gross margin: *"Its a tall ask if the labs aren't going to do the heavy lifting." Lala* here put the 40GW at ~$2T of capex, equal to all the AI compute built to date (*"a 100% growth next year isnt enough"*), and *ALC* here said the best case is the 2027 GW *"underdelivers... say 20-25GW."* The bulls pushed back. *atl42* here: *"100% growth next year is actually pretty conservative"* for a company on a path to 10x this year, so the question is the 4Q26 exit rate, and the way it resolves here is an S-1 that justifies the unit economics plus 4Q momentum on the roadshow that surprises to the upside. *Ted* here noted we asked the CSPs the exact same questions last quarter, *"And then Microsoft was up 15% and AMZN up 20%." Arun* here argued this round is different: people aren't questioning capex vs ROI but the commitments, and he doesn't see the handover from frontier to non-frontier demand happening *"without indigestion." Akh* here called it *"covid redux"* in some interesting framing:

> OJ 在此指出：扣除大客户并从披露信息中进行推算，OJ 发现 8/9 月份的净新增 ARR 仅为 ~55 亿美元，这使得 1000-1100 亿美元的年底目标看起来“完全是幻想”，2027 财年的收入可能只有 ~1200 亿美元，远不及 8 月份流传的 2028 财年 1900-2000 亿美元的目标。Arun Dhar 从算力预期的角度进行了分析：明年新增 40GW 算力，全年平均 ~20GW，这意味着算力提供商将获得 ~2800-3200 亿美元的收入；而市场共识正趋向于 OpenAI + Anthropic 在 2027 财年实现 ~2000 亿美元收入（约 1200 亿美元增量），那么剩下的 ~1800 亿美元必须由其他所有人（GOOGL、META、AMZN/MSFT 的自有工作负载、其他模型提供商、企业级 AI）在毛利率为零的情况下贡献。他表示：“如果这些实验室不承担重任，这个要求就太高了。”Lala 在此将 40GW 算力折算为 ~2 万亿美元的资本支出，相当于迄今为止构建的所有 AI 算力总和（“明年增长 100% 甚至都不够”），而 ALC 则表示，最好的情况是 2027 年的 GW 级目标“无法达标……比如只有 20-25GW”。看多者对此进行了反驳。atl42 表示：“明年增长 100% 对于一家今年有望增长 10 倍的公司来说其实相当保守”，因此关键在于 2026 年第四季度的退出率，而解决这一分歧的方式是提供一份能够证明单位经济效益的 S-1 文件，并在路演中展示超预期的第四季度增长势头。Ted 在此指出，我们上个季度问了云服务提供商（CSP）完全相同的问题，“结果微软随后上涨了 15%，亚马逊上涨了 20%。”Arun 则认为这一轮有所不同：人们质疑的不是资本支出与投资回报率（ROI）的关系，而是这些承诺本身，他认为从前沿需求向非前沿需求的过渡不会“毫无波折”地发生。Akh 在此用了一些有趣的措辞，将其称为“新冠疫情的重演”：

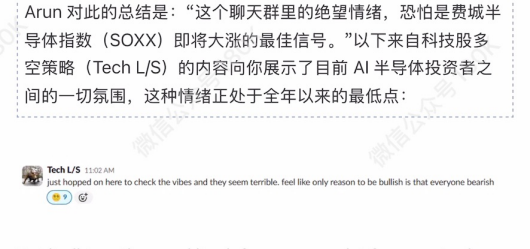


Akh Today at 7:04 AM

I'm gonna go one step further and say this is a la "covid redux"... remember the ecommerce spike above trendline during covid? Eventually it came back to trendline...the stocks had their boom/bust to coincide with it...claude code and openclaw was a literal explosion 💥...prior to that the labs were growing at a nice clip, then they suddenly 10x'd...market as usual bid everything up bigly... now we undergoing normalization and a bust is part of that process...of course, during the bust we will go onto bigger further and proclaim it's over, etc etc...par for the course...i think agentic in the enterprise keeps growth healthy, but it will pale relative to that 💥 and so we need some time to "forget" (i.e. lap the comps)

The question *bretzel* left open for the next two weeks here: what can the hyperscalers say on their prints to reignite confidence, when the worry will be how much of the beat is Anthropic/OpenAI and how sustainable it is if they slow down. *Arun's* closing take here: *"the despair in this chat prob best sign SOXX gonna rip soon." Below from Tech L/S* tells you everything about the vibes among AI semi investors right now, which is as low as we've seen it all year:

> Bretzel 在接下来的两周里留下了一个悬而未决的问题：当市场担忧业绩超预期中有多大程度上归功于 Anthropic/OpenAI，以及如果这些公司放缓增长，这种增长是否具有可持续性时，超大规模云服务商（Hyperscalers）在财报中能说些什么来重振信心？Arun 对此的总结是：“这个聊天群里的绝望情绪，恐怕是费城半导体指数（SOXX）即将大涨的最佳信号。”以下来自科技多空策略（Tech L/S）的内容则告诉了你目前 AI 半导体投资者之间的一切氛围，这种情绪正处于全年以来的最低点：



Tech L/S

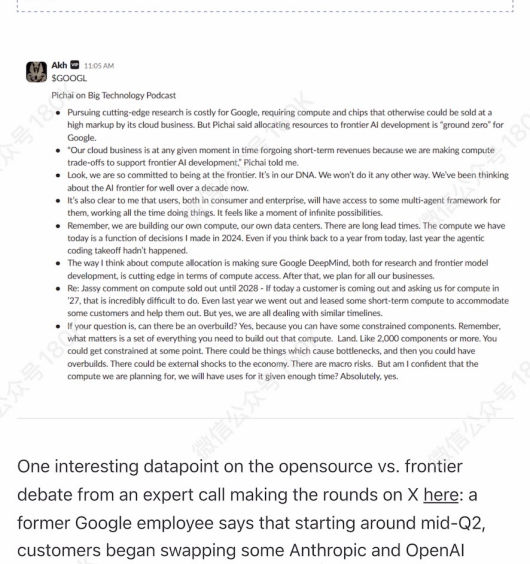
Just hopped on here to check the vibes and they seem terrible. feel like only reason to be bullish is that everyone bearish

Put it all together, and it reinforces our point from yesterday: turning over the rocks is healthy, but semis investors need time to assess what's underneath and rebuild conviction. This feels different from the bouts of indigestion we've seen over the past 2-3 years where new highs always felt on the horizon as the debates now center on whether lab revs can support commitments already made, making another capex raise or rev beat this EPS season less obviously reassuring. As you can tell from the back and forth above, the AI investor debate is maturing alongside the trade itself, with greater scrutiny replacing the go-go days of May/June and the unquestioned conviction of the past few years...interesting times.

> 综合来看，这进一步印证了我们昨天的观点：彻底排查风险是健康的，但半导体投资者需要时间来评估底层状况并重建信心。这与过去 2-3 年我们看到的那些“消化不良”时期有所不同，当时新高似乎总是在地平线上；而现在的辩论中心在于实验室收入是否能支撑已作出的承诺，这使得本财报季即使再出现资本支出上调或营收超预期，也不再像以前那样能明显安抚市场。正如你从上述反复讨论中所见，AI 投资者的辩论正随着交易本身一同走向成熟，更严苛的审视取代了五六月份的狂热以及过去几年的盲目坚信……真是有趣的时代。

Some good color from GOOGL CEO on the compute build out from the Big Technology podcast today which *Akh* recapped for us in Slack:

> 谷歌（GOOGL）首席执行官在今天的 Big Technology 播客中就算力建设发表了一些精彩见解，Akh 已在 Slack 中为我们做了总结：



Akh

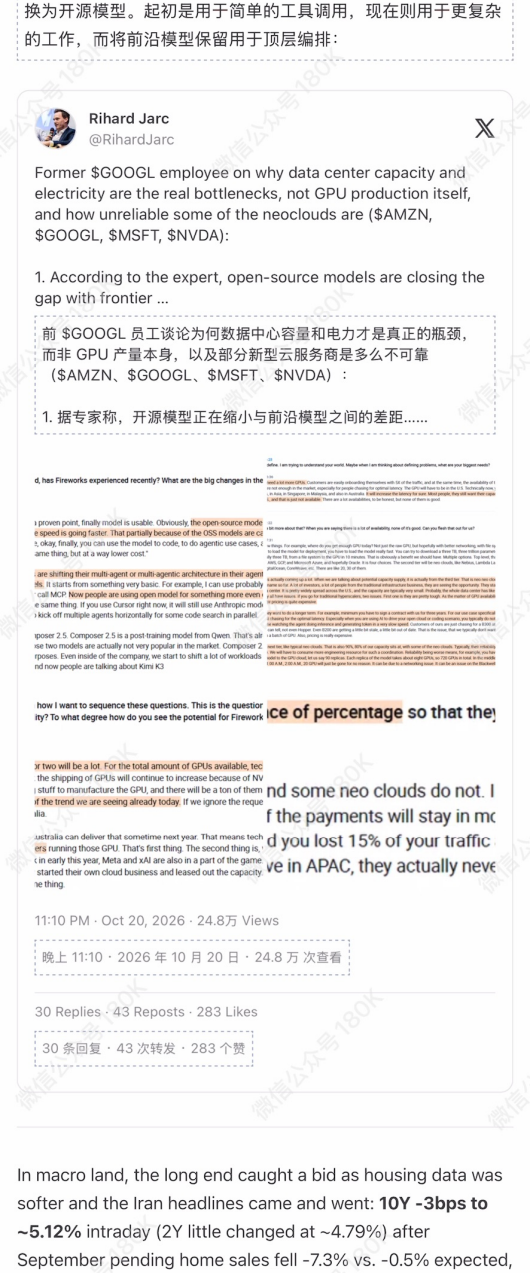
$GOOGL

Pichai on Big Technology Podcast

- Pursuing cutting edge research is costly for Google, requiring compute and chips that otherwise could be sold at a high markup by its cloud business. But Pichai said allocating resources to frontier AI development is "ground zero" for Google.
- "Our cloud business is at any given moment in time foregoing short-term measures how we are making compute trade-offs to support frontier AI development," Pichai told me.
- Look, we are so committed to being at the frontier. It's in our DNA. We won't do it any other way. We're thinking about the AI frontier for well over a decade now.
- It's also clear to me that users, both in consumer and enterprise, will have access to some multi-agent framework for them, working all the time doing things. It feels like a moment of infinite possibilities.
- Remember, we are building our own compute, our own data centers. There are long lead times. The compute we have today is a function of decisions I made in 2024.
- The way I think about compute allocation is making sure Google DeepMind, both for research and frontier model development, is cutting edge in terms of compute access. After that, we plan for all our businesses.
- If today a customer is coming out and asking us for compute in '27, that is incredibly difficult to do. Even last year we went out and leased some short-term compute to accommodate some customers and help them out. But yes, we are all dealing with similar timelines.
- If your question is, can there be an overbuild? Yes, because you can have some constrained components. There could be things which cause bottlenecks, and then you could have overbuilds. There could be external shocks to the economy. There are macro risks.. But am I confident that the compute we are planning for, we will have uses for it given enough time? Absolutely, yes.

One interesting datapoint on the opensource vs. frontier debate from an expert call making the rounds on X here: a former Google employee says that starting around mid-Q2, customers began swapping some Anthropic and OpenAI models out of their multi-agent setups for open-source ones, first for simple tool calls and now for more complicated work, keeping the frontier models for top-level orchestration:

> 关于开源与前沿模型之争，X 上流传的一场专家电话会议提供了一个有趣的数据点：一位前谷歌员工表示，从第二季度中期开始，客户开始在多智能体架构中将部分 Anthropic 和 OpenAI 模型替换为开源模型。起初是用于简单的工具调用，现在则用于更复杂的工作，而将前沿模型保留用于顶层编排：



Rihard Jarc
@RihardJarc

Former $GOOGL employee on why data center capacity and electricity are the real bottlenecks, not GPU production itself, and how unreliable some of the neoclouds are ($AMZN, $GOOGL, $MSFT, $NVDA):

1. According to the expert, open-source models are closing the gap with frontier ...

前 $GOOGL 员工谈论为何数据中心容量和电力才是真正的瓶颈，而非 GPU 产量本身，以及部分新型云服务商有多么不可靠（$AMZN、$GOOGL、$MSFT、$NVDA）：

1. 据专家称，开源模型正在缩小与前沿模型之间的差距……

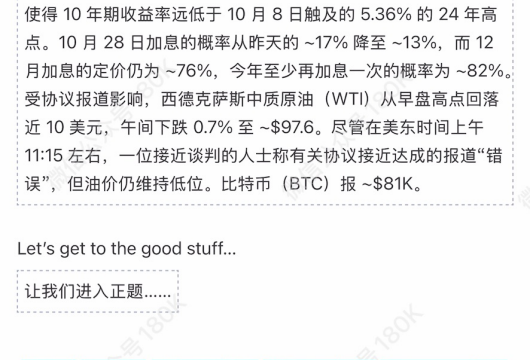
In macro land, the long end caught a bid as housing data was softer and the Iran headlines came and went: **10Y -3bps to ~5.12%** intraday (2Y little changed at ~4.79%) after September pending home sales fell -7.3% vs. -0.5% expected, blamed on mortgage rates, leaving the 10Y well off the 5.36% 24-year high it hit 10/8. Odds of a 10/28 hike slipped to ~13% from ~17% yesterday, with December still ~76% priced for a hike and ~82% odds of at least one more this year. WTI reversed nearly $10 off its early high on the deal reports, and is **WTI -0.7%** to ~$97.6 midday, staying lower even after a person close to the talks called reports a deal is close "wrong" around 11:15am ET. **BTC ~$81K**.

> 在宏观领域，由于住房数据疲软以及伊朗相关头条新闻的影响，长端国债获得买盘：10 年期国债收益率日内下跌 3 个基点至 ~5.12%（2 年期变动不大，报 ~4.79%）。此前 9 月待完成房屋销售下降 7.3%，远超预期的 0.5%，这归咎于抵押贷款利率，使得 10 年期收益率远低于 10 月 8 日触及的 5.36% 的 24 年高点。10 月 28 日加息的概率从昨天的 ~17% 降至 ~13%，而 12 月加息的定价仍为 ~76%，今年至少再加息一次的概率为 ~82%。受协议报道影响，西德克萨斯中质原油（WTI）从早盘高点回落近 10 美元，午间下跌 0.7% 至 ~$97.6，尽管在美东时间上午 11:15 左右，一位接近谈判的人士称有关协议接近达成的报道“错误”，但油价仍维持低位。比特币（BTC）报 ~$81K。

Let's get to the good stuff...

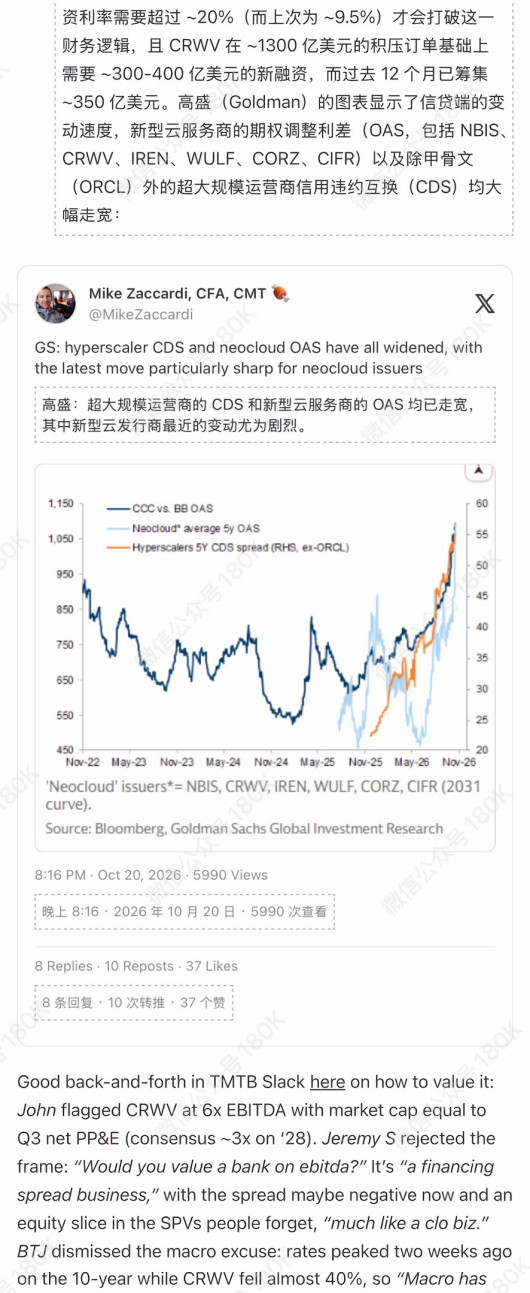
> 让我们进入正题……



AI/SEMIS 人工智能/半导体 [[source_end]]

- **Neoclouds bounced off the lows: CRWV +2.5%; NBIS +69bps; IREN -4.1%**, CRWV from -6.4% at a new 52-week low. HSBC argued CRWV still trades at 14.7x 2030e EV/EBIT vs. hyperscalers at 7-11x, with an average 2026-30e ROIC of 8.9% below its cost of borrowing, while JPM sized bank exposure as manageable (~$24B of DDTL commitments, ~$1-3B at the biggest US banks and MUFG). Bulls continue to lean on GPU pricing (we showed a bunch of chart here yesterday showing rental prices continuing to hit new highs). On CRWV, one framing we heard is that GPU rental prices rose ~37.5% across two increases in 3Q, so asset-backed financing rates would need to top ~20% (vs. ~9.5% last time) to break the math, and CRWV needs ~$30-40B of new funding against ~$130B of backlog vs. ~$35B raised over the past 12 months. Goldman's chart here shows how fast the credit side has moved, with neocloud OAS (NBIS, CRWV, IREN, WULF, CORZ, CIFR) and ex-ORCL hyperscaler CDS both widening sharply:

  > 新型云服务商（Neoclouds）从低点反弹：CRWV +2.5%；NBIS +69 个基点；IREN -4.1%，CRWV 从创下 52 周新低的 -6.4% 回升。汇丰银行（HSBC）认为，CRWV 的 2030 年预期企业价值/息税前利润（EV/EBIT）仍为 14.7 倍，而超大规模运营商仅为 7-11 倍，且 2026-30 年预期平均投资回报率（ROIC）为 8.9%，低于其借贷成本；同时，摩根大通（JPM）评估认为银行风险敞口在可控范围内（约 240 亿美元的延期提款定期贷款 (DDTL) 承诺，其中最大的美国银行和三菱日联银行（MUFG）各占 ~10-30 亿美元）。看多者继续将希望寄于 GPU 定价（我们昨天展示的一系列图表显示租赁价格持续创下新高）。关于 CRWV，我们听到的一种说法是，GPU 租赁价格在第三季度经历两次上涨，累计涨幅达 ~37.5%，因此资产抵押融资利率需要超过 ~20%（而上次为 ~9.5%）才会打破这一财务逻辑，且 CRWV 在 ~1300 亿美元的积压订单基础上需要 ~300-400 亿美元的新融资，而过去 12 个月已筹集 ~350 亿美元。高盛（Goldman）的图表显示了信贷端的变动速度，新型云服务商的期权调整利差（OAS，包括 NBIS、CRWV、IREN、WULF、CORZ、CIFR）以及除甲骨文（ORCL）外的超大规模运营商信用违约互换（CDS）均大幅走宽：



Mike Zaccardi, CFA, CMT 🍁
@MikeZaccardi

GS: hyperscaler CDS and neocloud OAS have all widened, with the latest move particularly sharp for neocloud issuers

高盛：超大规模运营商的 CDS 和新型云服务商的 OAS 均已走宽，其中新型云发行商最近的变动尤为剧烈。

'Neocloud' issuers*= NBIS, CRWV, IREN, WULF, CORZ, CIFR (2031 curve).

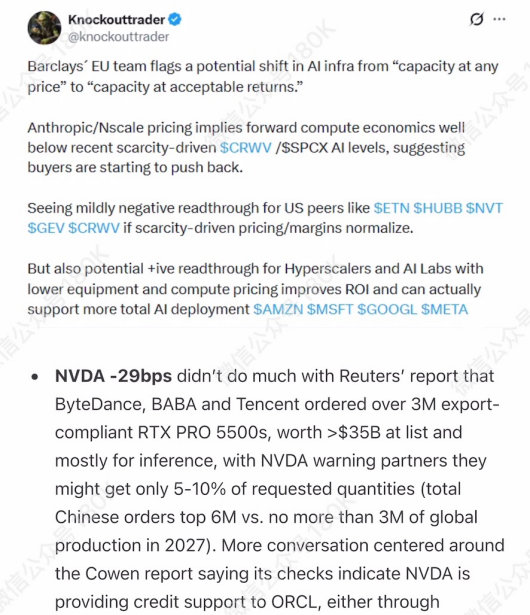
Good back-and-forth in TMTB Slack here on how to value it: *John* flagged CRWV at 6x EBITDA with market cap equal to Q3 net PP&E (consensus ~3x on '28). *Jeremy S* rejected the frame: *"Would you value a bank on ebitda?"* It's *"a financing spread business,"* with the spread maybe negative now and an equity slice in the SPVs people forget, *"much like a clo biz." BTJ* dismissed the macro excuse: rates peaked two weeks ago on the 10-year while CRWV fell almost 40%, so *"Macro has very little (if in fact absolutely nothing) to do with it."*

> TMTB Slack 频道里关于如何对其估值的讨论非常激烈：John 指出 CRWV 的估值为 6 倍 EBITDA，市值等于第三季度净固定资产（PP&E）（市场共识为 28 年 ~3 倍）。Jeremy S 拒绝了这一框架：“你会用 EBITDA 给银行估值吗？”它是一个“融资利差业务”，目前的利差可能为负，而且在人们容易忽略的 SPV（特殊目的机构）中占有股权份额，“非常像 CLO（贷款抵押债券）业务”。BTJ 驳斥了宏观借口：10 年期国债利率在两周前见顶，而 CRWV 却下跌了近 40%，因此“宏观因素与其几乎没有关系（事实上绝对没有关系）”。

- More AI Financing: Bloomberg reported late yesterday that Anthropic is discussing a second ~$45B Nscale deal for another 460MW building in West Virginia on Vera Rubin, roughly doubling its commitment there. Barclays' European team read that pricing the other way here: it implies forward compute economics well below the recent scarcity-driven levels at CRWV/SPCX, a shift from capacity at any price to capacity at acceptable returns as buyers start to push back:

  > 更多 AI 融资消息：彭博社昨日晚间报道，Anthropic 正在洽谈第二笔 ~450 亿美元的 Nscale 交易，计划在西弗吉尼亚州的 Vera Rubin 园区再建一座 460MW 的建筑，使其在那里的承诺投入翻倍。巴克莱欧洲团队对此给出了相反的定价解读：这暗示远期算力经济效益远低于 CRWV/SPCX 因稀缺性驱动的水平，随着买家开始抵制，市场正从“不计代价获取产能”转向“在可接受的回报率下获取产能”。



Knockouttrader
@knockouttrader

Barclays' EU team flags a potential shift in AI infra from "capacity at any price" to "capacity at acceptable returns."

Anthropic/Nscale pricing implies forward compute economics well below recent scarcity-driven $CRWV /$SPCX AI levels, suggesting buyers are starting to push back.

Seeing mildly negative readthrough for US peers like $ETN $HUBB $NVT $GEV $CRWV if scarcity-driven pricing/margins normalize.

But also potential +ive readthrough for Hyperscalers and AI Labs with lower equipment and compute pricing improves ROI and can actually support more total AI deployment $AMZN $MSFT $GOOGL $META

- **NVDA -29bps** didn't do much with Reuters' report that ByteDance, BABA and Tencent ordered over 3M export-compliant RTX PRO 5500s, worth >$35B at list and mostly for inference, with NVDA warning partners they might get only 5-10% of requested quantities (total Chinese orders top 6M vs. no more than 3M of global production in 2027). More conversation centered around the Cowen report saying its checks indicate NVDA is providing credit support to ORCL, either through backstops or by leasing capacity directly and subleasing it to ORCL. *Zack* called it the most important datapoint of the day, *"Evidence of NVDA throwing its weight behind the sector"*; *Jeremy S* saw *"additional subordination"* and called it *"super negative - nvidia risks its credit profile and also margin profile,"* with *Zack* noting NVDA CDS blowing out to new wides.

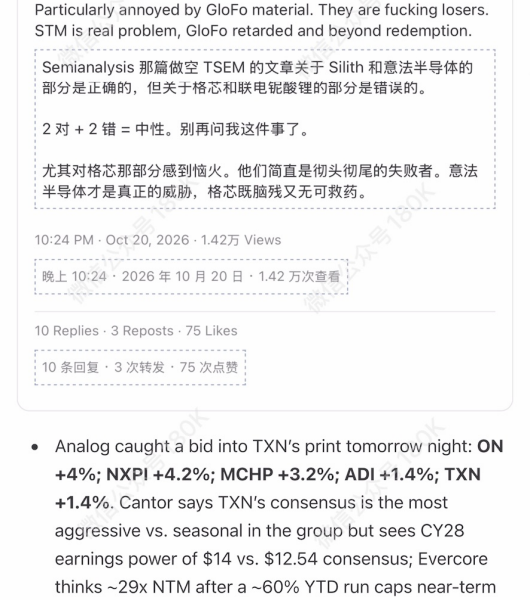
  > NVDA 下跌 29 个基点，对路透社的报道反应平平。该报道称字节跳动、阿里巴巴和腾讯订购了超过 300 万张符合出口限制的 RTX PRO 5500 显卡，按标价计算价值超过 350 亿美元，且主要用于推理；NVDA 警告合作伙伴，他们可能只能获得申请数量的 5-10%（中国总订单量超过 600 万张，而 2027 年全球产量不超过 300 万张）。更多讨论集中在 Cowen 的报告上，该报告称其调研显示 NVDA 正在向 ORCL 提供信用支持，方式包括提供担保或直接租赁产能再转租给 ORCL。Zack 称其为当天最重要的资料点，“证明了 NVDA 正在动用其影响力支持该行业”；Jeremy S 则看到了“额外的从属风险”，并称其“极度负面——英伟达冒着损害其信用状况和利润率的风险”，Zack 也注意到 NVDA 的 CDS（信用违约互换）已飙升至新高。

- More deatil on the Cowen report: they see ~15GW of US data-center leasing in 3Q26, +70% q/q and ~7.5x 2Q25, with ~10GW from AI labs including ~8GW from OpenAI, and META seeking another ~6.5GW by YE28. The bottleneck is shifting from demand to delivery: 2027 equipment slots are already oversold, Texas/Ohio permitting could delay capacity, and the US capacity contracted since 1Q25 implies ~$2.25T of building + IT capex.

  > Cowen 报告的更多细节：他们预计 2026 年第三季度美国数据中心租赁量将达到 ~15GW，环比增长 70%，是 2025 年第二季度的 ~7.5 倍。其中 ~10GW 来自 AI 实验室，包括来自 OpenAI 的 ~8GW，而 META 正寻求在 2028 年底前再获得 ~6.5GW。瓶颈正从需求转向交付：2027 年的设备席位已超售，德克萨斯州/俄亥俄州的许可可能会推迟产能释放，自 2025 年第一季度以来签约的美国产能意味着 ~2.25 万亿美元的建筑 + IT 资本支出。

- **TSEM -6.8%** (low -10.7%) on a bearish SemiAnalysis note on its silicon photonics foundry position, citing competition from STM, GFS and UMC (including UMC's lithium niobate work).

  > TSEM 下跌 6.8%（最低跌幅 10.7%），此前 SemiAnalysis 发布了一份看空其硅光子代工地位的报告，理由是来自意法半导体（STM）、格芯（GFS）和联电（UMC）的竞争（包括联电在铌酸锂方面的工作）。



Irrational Analysis
@insane_analyst

The Semianalysis anti-TSEM note is correct on Silith and STM, wrong on GloFo and UMC LiNbO3.

2 right + 2 wrong = neutral. Stop asking me about it.

Particularly annoyed by GloFo material. They are fucking losers. STM is real problem, GloFo retarded and beyond redemption.

Semianalysis 那篇做空 TSEM 的文章关于 Silith 和意法半导体的部分是正确的，但关于格芯和联电铌酸锂的部分是错误的。

2 对 + 2 错 = 中性。别再问我这件事了。

尤其对格芯那部分感到恼火，他们简直是彻头彻尾的失败者。意法半导体才是真正的威胁，格芯既脑残又无可救药。

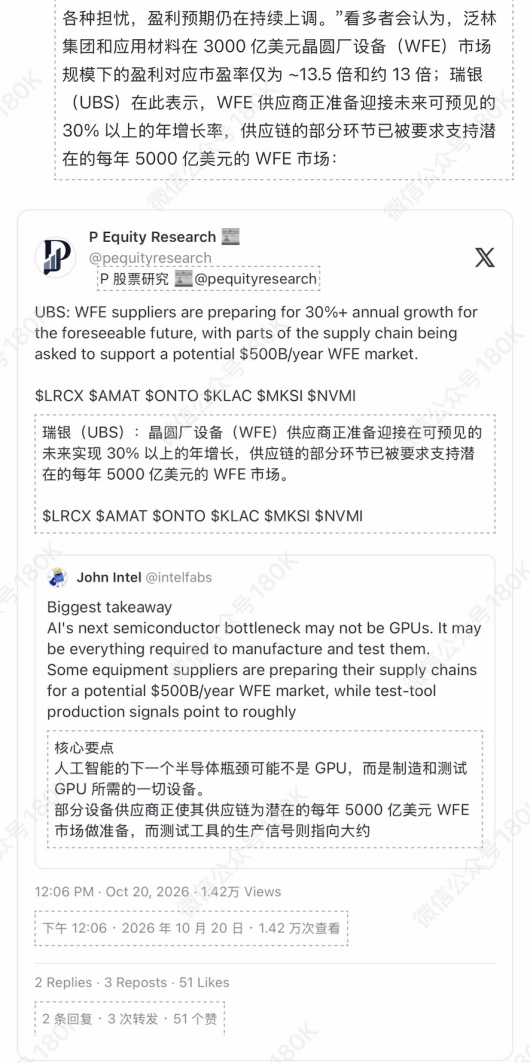
- Analog caught a bid into TXN's print tomorrow night: **ON +4%; NXPI +4.2%; MCHP +3.2%; ADI +1.4%; TXN +1.4%.** Cantor says TXN's consensus is the most aggressive vs. seasonal in the group but sees CY28 earnings power of $14 vs. $12.54 consensus; Evercore thinks ~29x NTM after a ~60% YTD run caps near-term upside even with a beat-and-raise. Semi investors will say that TXN has both the capacity and the pricing power as mature nodes fill, so its print should matter more for the group than LRCX.

  > 模拟芯片板块在德州仪器（TXN）明晚发布财报前获得买盘支撑：安森美（ON）+4%；恩智浦（NXPI）+4.2%；微芯科技（MCHP）+3.2%；亚德诺（ADI）+1.4%；德州仪器（TXN）+1.4%。Cantor 表示，德州仪器的市场共识预期是该板块中相对于季节性表现最激进的，但预计其 2028 历年盈利能力为 14 美元，高于 12.54 美元的共识预期；Evercore 则认为，在年初至今上涨 ~60% 后，~29 倍的远期 12 个月（NTM）市盈率限制了其短期上行空间，即便业绩超预期并上调指引也是如此。半导体投资者会认为，随着成熟制程节点产能填满，德州仪器同时具备产能和定价权，因此其财报对板块的影响力应超过泛林集团（LRCX）。

- Semicap lagged into LRCX's print tomorrow night: **LRCX -2.6%; KLAC -1.8%; AMAT -1.6%**, LRCX giving back most of Monday's +3.1% after it and KLAC fell 10 straight sessions through Friday (-24%/-20%). MS came away from AMAT meetings more positive on DRAM share and front-end process control, but logic share losses from 3nm to 2nm were worse than expected and at ~16x CY28 it prefers AEIS/MKSI. On the other side, *Mike* in TMTB Slack here pointed out that despite 30-60% contractions in forward P/Es since the peak, estimates are up 10-20% in most cases (AMAT's consensus is ~$18.64 for 2027 and ~$23.70 for 2028 with the stock well off its June high), and memory/optical look similar: *"despite all the fears earnings estimates continue to go up."* Bulls will say that LRCX and AMAT trade at only ~13.5x/~13x on $300B-WFE earnings, and UBS says here WFE suppliers are preparing for 30%+ annual growth for the foreseeable future, with parts of the chain asked to support a potential $500B/yr WFE market:

  > 半导体设备板块在泛林集团（LRCX）明晚发布财报前表现滞后：泛林集团（LRCX）-2.6%；科磊（KLAC）-1.8%；应用材料（AMAT）-1.6%。泛林集团回吐了周一 +3.1% 的大部分涨幅，此前该股与科磊截至上周五已连续 10 个交易日下跌（分别下跌 -24%/-20%）。摩根士丹利（MS）在与应用材料会面后，对其 DRAM 份额和前道工艺控制持更加积极的态度，但 3nm 到 2nm 的逻辑芯片份额损失超预期，且在 ~2028 历年 16 倍市盈率的估值下，大摩更青睐 AEIS/MKSI。另一方面，TMTB Slack 频道的 Mike 指出，尽管前向市盈率自高点以来收缩了 30-60%，但多数情况下的盈利预期却上调了 10-20%（应用材料 2027 年的共识预期为 ~18.64 美元，2028 年为 ~23.70 美元，而股价已远低于 6 月高点），存储和光学领域情况类似：“尽管存在各种担忧，盈利预期仍在持续上调。”看多者会认为，泛林集团和应用材料在 3000 亿美元晶圆厂设备（WFE）市场规模下的盈利对应市盈率仅为 ~13.5 倍和约 13 倍；瑞银（UBS）在此表示，WFE 供应商正准备迎接未来可预见的 30% 以上的年增长率，供应链的部分环节已被要求支持潜在的每年 5000 亿美元的 WFE 市场：



P Equity Research 🇺🇸
@pequityresearch
P 股票研究 🇺🇸 @pequityresearch

UBS: WFE suppliers are preparing for 30%+ annual growth for the foreseeable future, with parts of the supply chain being asked to support a potential $500B/yr WFE market.

$LRCX $AMAT $ONTO $KLAC $MKSI $NVMI

瑞银（UBS）：晶圆厂设备（WFE）供应商正准备迎接在可预见的未来实现 30% 以上的年增长，供应链的部分环节已被要求支持潜在的每年 5000 亿美元的 WFE 市场。

$LRCX $AMAT $ONTO $KLAC $MKSI $NVMI

John Intel @intelfabs

Biggest takeaway

AI's next semiconductor bottleneck may not be GPUs. It may be everything required to manufacture and test them.

Some equipment suppliers are preparing their supply chains for a potential $500B/year WFE market, while test-tool production signals point to roughly

核心要点

人工智能的下一个半导体瓶颈可能不是 GPU，而是制造和测试 GPU 所需的一切设备。

部分设备供应商正使其供应链为潜在的每年 5000 亿美元 WFE 市场做准备，而测试工具的生产信号则指向约

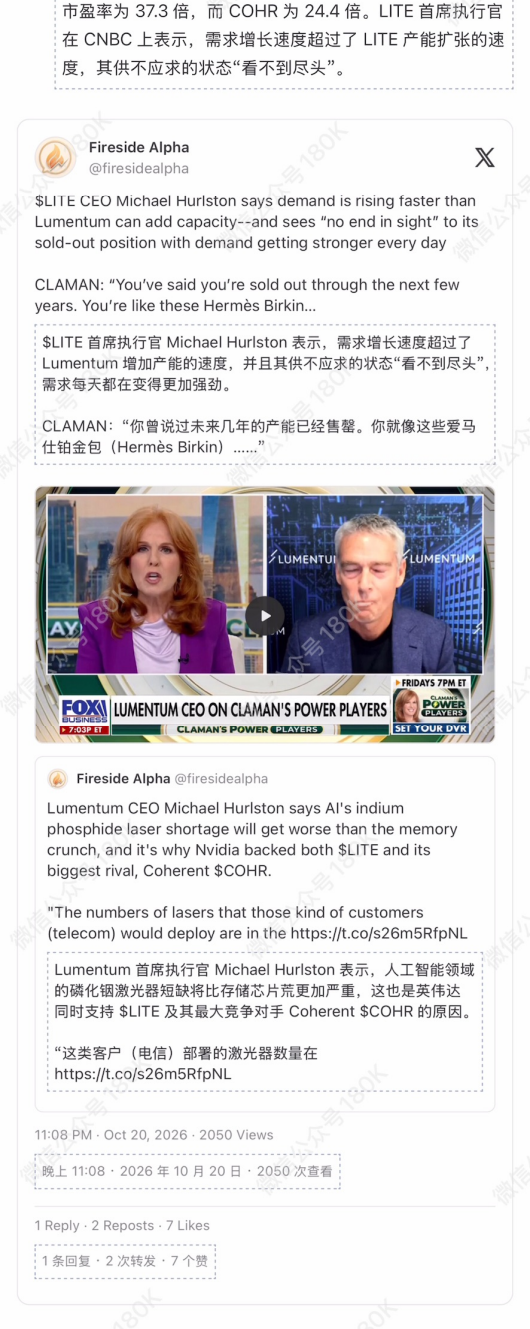
- Optics round-tripped: **COHR +20bps; LITE -1.3%; CIEN -78bps; CRDO +39bps** (COHR -6.1%, CRDO -6.8% at the lows). Bernstein dropped its LITE preference and moved even-handed into the prints: the real debate is whether 2028 CPO bandwidth math holds (scale-up implying a 6-7x opportunity at comparable pricing) vs. bears arguing InP supply bottlenecks are the only thing propping up pricing, with LITE at 37.3x '27E vs. COHR at 24.4x. LITE's CEO told CNBC here demand is rising faster than LITE can add capacity, with "no end in sight" to its sold-out position.

  > 光学板块走势反转：COHR +20bps；LITE -1.3%；CIEN -78bps；CRDO +39bps（盘中低点时 COHR -6.1%，CRDO -6.8%）。伯恩斯坦（Bernstein）放弃了对 LITE 的偏好，在财报发布前转向中立态度：真正的争论点在于 2028 年 CPO 带宽计算是否成立（规模扩大意味着在同等价格下有 6-7 倍的机会），而看空者则认为磷化铟（InP）供应瓶颈是支撑价格的唯一因素，目前 LITE 的 27 年预期市盈率为 37.3 倍，而 COHR 为 24.4 倍。LITE 首席执行官在 CNBC 上表示，需求增长速度超过了 LITE 产能扩张的速度，其供不应求的状态“看不到尽头”。



Fireside Alpha
@firesidealpha

$LITE CEO Michael Hurlston says demand is rising faster than Lumentum can add capacity--and sees "no end in sight" to its sold-out position with demand getting stronger every day

CLAMAN: "You've said you're sold out through the next few years. You're like these Hermès Birkin...

$LITE 首席执行官 Michael Hurlston 表示，需求增长速度超过了 Lumentum 增加产能的速度，并且其供不应求的状态“看不到尽头”，需求每天都在变得更加强劲。

CLAMAN：“你曾说过未来几年的产能已经售罄，你就像这些爱马仕铂金包（Hermès Birkin）……”

Fireside Alpha @firesidealpha

Lumentum CEO Michael Hurlston says AI's indium phosphide laser shortage will get worse than the memory crunch, and it's why Nvidia backed both $LITE and its biggest rival, Coherent $COHR.

"The number of lasers that those kind of customers (telecom) would deploy are in the https://t.co/s26m5RfpNL

Lumentum 首席执行官 Michael Hurlston 表示，人工智能领域的磷化铟激光器短缺将比存储芯片危机更严重，这也是英伟达同时支持 $LITE 及其最大竞争对手 Coherent $COHR 的原因。

“这类客户（电信）部署的激光器数量在 https://t.co/s26m5RfpNL

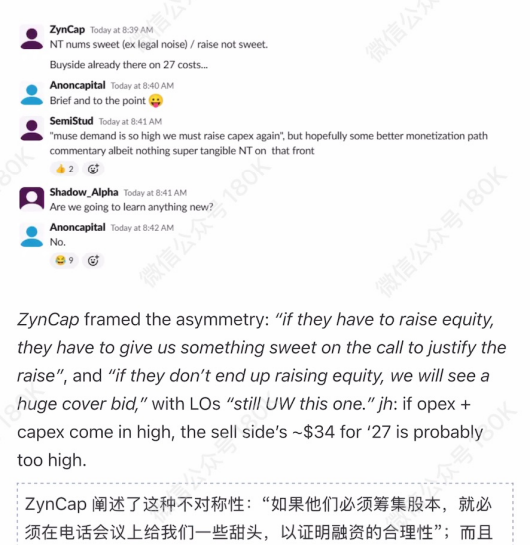
- **TSM +1.3%**: a check we heard has N2 going to at least ~200k wafers a month next year vs. 160-170k assumed before, with capex of ~$82-83B next year and ~$92B in 2028.

  > TSM +1.3%：我们听到的一项调研显示，明年 N2 产能将达到每月至少 ~20 万片晶圆，而此前预期为 16-17 万片；明年资本支出为 ~820-830 亿美元，2028 年为 ~920 亿美元。

INTERNET 互联网

- **META -2.3%** (low -3.5%) heads into tomorrow night's print with 2027 spend and a possible equity raise the key debates along with next quarter's guide. Buyside sits at ~$210-220B of 2027 expenses vs. Street $203B and ~$225-250B of capex vs. Street $198B. Wells has FY27 EPS cut to $31-32 on $210-215B of opex, a trough earnings year. On ads, Edgewater's followed yesterday's mixed Clev checks saying macro softer at the margin near end of the quarter, although they said META still finished in upper end of the range. Bloomberg also reported RBC is weighing blocking Muse's agent from customer data, and policy chief Joel Kaplan is leaving after 15+ years. Some good discussion on the META print here in Slack:

  > META -2.3%（最低 -3.5%）即将在明晚发布财报，2027 年的支出和可能的股权融资是核心争论点，此外还有下季度的指引。买方预期 2027 年费用为 ~2100-2200 亿美元（卖方预期为 2030 亿美元），资本支出为 ~2250-2500 亿美元（卖方预期为 1980 亿美元）。富国银行将 2027 财年每股收益（EPS）下调至 31-32 美元，基于 2100-2150 亿美元的运营支出，这将是盈利谷底的一年。广告方面，Edgewater 继昨日 Cleveland 喜忧参半的调研后表示，季度末宏观环境略有走软，但他们称 META 仍处于区间上游。彭博社还报道称，加拿大皇家银行（RBC）正考虑阻止 Muse 的代理程序获取客户数据，且任职 15 年以上的政策主管 Joel Kaplan 即将离职。Slack 上有一些关于 META 财报的精彩讨论：



ZynCap Today at 8:39 AM

NT nums sweet (ex legal noise) / raise not sweet.

Buyside already there on 27 costs...

Anoncapital Today at 8:40 AM

Brief and to the point 😂

SemiStud Today at 8:41 AM

"muse demand is so high we must raise capex again". but hopefully some better monetization path commentary albeit nothing super tangible NT on that front

Shadow_Alpha Today at 8:41 AM

Are we going to learn anything new?

Anoncapital Today at 8:42 AM

No.

ZynCap framed the asymmetry: *"if they have to raise equity, they have to give us something sweet on the call to justify the raise"*, and *"if they don't end up raising equity, we will see a huge cover bid,"* with LOs *"still UW this one." jh:* if opex + capex come in high, the sell side's ~$34 for '27 is probably too high.

> ZynCap 阐述了这种不对称性：“如果他们必须筹集股本，就必须在电话会议上给我们一些甜头，以证明融资的合理性”；而且“如果他们最终没有筹集股本，我们将看到巨大的空头回补买盘”，因为长线投资者（LO）“对该股仍处于低配（UW）状态”。jh：如果运营支出（opex）+ 资本支出（capex）走高，卖方对 27 年 ~$34 的预期可能过高。

- **SE -8.9%** (low -8.6%) after the WSJ and Bloomberg reported the CEO memo opening SE's in-house cloud to enterprise customers and floating a Monee listing (Monee's Q2 revenue rose 59% to $1.4B), extending yesterday's -5.7% on M-sci showing weaker Indonesia/Brazil. Bernstein called both meaningful optionality while bears heard capital intensity Some good discussion in TMTB Slack here: *jmmcapital: "I don't think cloud biz would be positive. Management focus should be executing margin story re ecom." unclebobs* on scale: *"$1.5-2bn p.a. barely buys 50mw of NVDA." Anon User* took the other side: 25x+ ROICs, servers already built for the three core businesses and a large net cash balance, so opening it to third parties turns a cost center into a business, *"ie what amazon did with aws."*

  > SE 下跌 8.9%（低点为 -8.6%），此前《华尔街日报》和彭博社报道了首席执行官的备忘录，内容涉及向企业客户开放 SE 的内部云服务，并考虑让 Monee 上市（Monee 第二季度营收增长 59% 至 14 亿美元），延续了昨日因 M-sci 显示印尼/巴西市场疲软而下跌 5.7% 的跌势。Bernstein 称这两项举措都是极具意义的选择权，而看空者则从中听出了资本密集度的担忧。TMTB Slack 中有一些精彩讨论：jmmcapital：“我不认为云业务会是利好。管理层的重心应放在兑现电商业务的利润增长故事上。”unclebobs 谈及规模时表示：“每年 15-20 亿美元仅够买下 50 兆瓦的英伟达设备。”匿名用户持相反意见：ROIC 超过 25%，服务器已为三大核心业务构建完毕，且拥有大量净现金余额，因此向第三方开放将使成本中心转变为业务，“即亚马逊对 AWS 所做的尝试”。

- **NFLX -1.7%** reports after the bell (options imply ±8%) with engagement the main concern: the WSJ reported Sarandos has complained internally about weak US viewing and too few hits as NFLX replaces senior content execs, and Antenna estimates no month of US net adds through September (NFLX disputes the data). The internal memo still has NFLX on track for 13-14% FY revenue growth and a 31.5% operating margin. Still a very significant short skew into the print.

  > NFLX -1.7% 盘后发布财报（期权隐含波动率为 ±8%），用户参与度是主要关注点：据《华尔街日报》报道，随着 NFLX 更换高级内容主管，Sarandos 在内部抱怨美国收视率疲软且热门剧集太少；Antenna 估计截至 9 月美国净增用户数为零（NFLX 对此数据表示异议）。内部备忘录显示 NFLX 仍有望实现 13-14% 的财年营收增长和 31.5% 的营业利润率。财报发布前仍存在非常显著的看空偏斜。

- **EXPE +3.1%; ABNB +88bps; BKNG +51bps** on Jefferies' hotel data: September global hotel spend +11% y/y, the fastest since January '25 (+4% room nights, +7% ADR), with North America rebounding to +11% (best for EXPE) and Europe +13% for a 17th straight month of outperformance (BKNG). A check we heard adds to the EXPE case: Vrbo moving all hosts to a flat 12% commission on 10/29 from 8% or 5%, so the take rate likely expands off ~22%.

  > EXPE +3.1%；ABNB +88bps；BKNG +51bps，受杰富瑞（Jefferies）酒店数据提振：9 月全球酒店支出同比增长 11%，为 25 年 1 月以来最快增速（间夜数 +4%，平均每日房价 ADR +7%），其中北美地区反弹至 +11%（对 EXPE 最为有利），欧洲地区增长 13%，连续 17 个月表现优异（利好 BKNG）。我们听到的一项调研为 EXPE 提供了进一步支撑：Vrbo 将于 10/29 将所有房东的佣金从 8% 或 5% 统一调整为 12%，因此变现率（take rate）可能会在 ~22% 的基础上进一步扩大。

- **GOOGL -1.5%**: Waymo plans to grow from ~4,000 robotaxis to 8,000 by year-end and 20,000 by end-2027 on this month's $5B loan (PIMCO, BX, Sixth Street), adding Madrid next year. Main debate heading into the print is search vs. cloud. 3p checks in the former pointing to just an inline print, although agency checks have been better. Everyone knows cloud will crush with buyside around 105-115% growth, although some concerns around GCP margins given the deal with SPCX.

  > GOOGL -1.5%：Waymo 计划利用本月获得的 50 亿美元贷款（来自 PIMCO、黑石 BX、Sixth Street 提供），将无人驾驶出租车规模从 ~4,000 辆增加到年底的 8,000 辆，并于 2027 年底达到 20,000 辆，明年将增加马德里站点。财报发布前的核心争论点在于搜索业务 vs. 云业务。第三方对前者的调研显示业绩仅符合预期，尽管代理机构的调研结果更好。人人都知道云业务将表现强劲，买方预期增长在 105-115% 左右，但考虑到与 SPCX 的交易，市场对 GCP（谷歌云平台）的利润率存在一些担忧。

- **AMZN flat**: Wells named it its top mega-cap internet long into 3Q on a positive AWS revenue/operating income revision

  > AMZN 持平：富国银行将其列为第三季度互联网大盘股的首选多头头寸，理由是 AWS 营收/营业利润预期上调。

- **MTCH +3.3%** extended yesterday's Evercore-upgrade move (Tinder's global MAUs turned positive y/y in September). The rest of SMID internet followed with no company news (**Z +4.3%; RBLX +2.9%; TTD +3.1%; PINS +2.7%; SNAP +2.9%)**, and **CHWY +4.4%.**

  > MTCH +3.3%，延续了昨日 Evercore 上调评级后的涨势（Tinder 9 月全球月活跃用户数同比转正）。其余中小型互联网股在无公司特定消息的情况下跟涨（Z +4.3%；RBLX +2.9%；TTD +3.1%；PINS +2.7%；SNAP +2.9%），CHWY +4.4%。

SOFTWARE 软件

- **CRM +5bps** recovered from -2.8% after agreeing to buy **BRZE +51.2%** for $47.50 in cash ($5.7B EV, a 58% premium, ~5x CY27 sales). Evercore worries the pace of M&A will bother value/GARP investors. *Hunter* in TMTB Slack here: *"funny cuz consensus was CRM had backed off of caring about marketing cloud to focus on other stuff. now we know they just were gonna buy the business back."*

  > CRM +5 个基点，从 -2.8% 的跌幅中回升，此前公司同意以每股 47.50 美元现金收购 BRZE（+51.2%）（企业价值 57 亿美元，溢价 58%，相当于 ~5 倍 2027 日历年销售额）。Evercore 担心并购节奏会困扰价值型/合理价格成长型（GARP）投资者。TMTB Slack 频道中的 Hunter 表示：“很有趣，因为共识曾认为 CRM 已经不再关注营销云，转而专注于其他领域。现在我们知道，他们只是打算直接把这块业务买回来。”

- App software bid likely helped by CRM's 58% premium for BRZE: **MNDY +7.6%; FIG +6.1%; HUBS +6.9%; IOT +4.7%; FRSH +5.9%; DOCU +4.5%; WIX +2.4%; WDAY +3.7%; ADBE +3.3%; INTU +2.9%. KVYO +12.5%; ZETA +3%** traded in sympathy with the acquisition.

  > 应用软件板块的买盘可能受益于 CRM 以 58% 的溢价收购 BRZE：MNDY +7.6%；FIG +6.1%；HUBS +6.9%；IOT +4.7%；FRSH +5.9%；DOCU +4.5%；WIX +2.4%；WDAY +3.7%；ADBE +3.3%；INTU +2.9%。KVYO +12.5%；ZETA +3% 随该收购案联动上涨。

- **ORCL +1.3%** (from -1.7%) on the TD Cowen checks: ORCL has returned to data-center procurement in 3Q26 with NVDA credit support and is in active vendor-financing talks, which Cowen reads as a sign of future RPO growth. That helps bulls whose FY27 case is that customer-owned hardware, prepayments and supplier deals let capacity outgrow ORCL-funded capex. Into the 10/28 AI World/analyst day, JPM expects FY30 targets to go up (its model is ~$12B above the FY30 revenue framework and ~$15B above OCI) but says funding matters more, with ORCL still needing roughly another $20B of capital in FY27 and gross capex potentially $90-95B. Citi sees room to raise the $166B FY30 OCI target on $200B+ of net new RPO over the past year.

  > ORCL +1.3%（从 -1.7% 回升），受 TD Cowen 调研影响：ORCL 已在 3Q26 恢复数据中心采购，并获得 NVDA 的信贷支持，目前正进行活跃的供应商融资谈判，Cowen 将此视为未来 RPO 增长的信号。这有利于多头：其对 FY27 的观点是：客户拥有的硬件、预付款和供应商协议将使产能增长超过 ORCL 自筹资金的资本支出。在 10/28 的 AI World/分析师日之前，摩根大通预计 FY30 目标将会上调（其模型比 FY30 营收框架高出 ~$120 亿，比 OCI 高出 ~$150 亿），但表示资金来源更重要，ORCL 在 FY27 仍需约 200 亿美元资本，总资本支出可能达到 900-950 亿美元。花旗认为，鉴于过去一年超过 2000 亿美元的净新增 RPO，FY30 1660 亿美元的 OCI 目标仍有上调空间。

- **BILL +6.6%** on Bloomberg's report that V is partnering with BILL and Billtrust so AI agents can start and complete B2B invoice payments without human authentication; BILL also said it passed $2T of cumulative payment volume (~$1B a day).

  > BILL 上涨 6.6%，此前彭博社报道称，Visa (V) 正与 BILL 及 Billtrust 展开合作，使 AI 代理能够在无需人工身份验证的情况下启动并完成 B2B 发票支付；此外，BILL 表示其累计支付额已突破 2 万亿美元（约合每天 10 亿美元）。

- **NOW +2.9%** on two positive previews: JPM sees 3Q cRPO of ~$13.6B, +19.5% y/y, with every renewing customer at one Elite partner moving to AI-native SKUs at a ~10-25% spend uplift (AI ACV topped $1B in 2Q vs. ~$600M exiting 2025), and Bernstein has the AI Native SKUs adding 60-70bps to Q4 growth. Checks have been pretty solid across the board here heading into the print

  > NOW 上涨 2.9%，受两份正面预研报告提振：摩根大通预计其第三季度 cRPO 为 ~136 亿美元，同比增长 19.5%，且某精英合作伙伴的所有续约客户均转向 AI 原生 SKU，支出提升幅度达 ~10-25%（第二季度 AI 年度合同价值 (ACV) 突破 10 亿美元，而 ~2025 年底的目标为 6 亿美元）；伯恩斯坦则认为 AI 原生 SKU 将为第四季度增长贡献 60-70 个基点。财报发布前，各方面的渠道调研数据均表现稳健。

- **MSFT -44bps**: BMO sees Azure upside even after lowering FY27 growth to 43.8% cc under the new reporting definition, with 44.5% in 1QFY27 accelerating to 45.5% in 2Q, as checks show customers moving from flexible enterprise agreements to committed-consumption contracts with harder annual spend floors.

  > MSFT 下跌 44 个基点：BMO 认为 Azure 仍有上行空间，尽管在新的财报统计口径下将 2027 财年增长预期下调至 43.8%（按固定汇率计算），其中 2027 财年第一季度增长 44.5%，第二季度加速至 45.5%；渠道调研显示，客户正从灵活的企业协议转向具有更严格年度最低支出限制的承诺消费合同。

- **TEM +5.3%** on last night's ESMO data with PFE for its AI lung-cancer pre-screening panel: 60,459 cases with >80% sensitivity on all 12 biomarkers.

  > TEM 上涨 5.3%，受昨晚公布的 ESMO 数据提振，该公司与辉瑞 (PFE) 合作开发了 AI 肺癌预筛查面板：在 60,459 个病例中，所有 12 种生物标志物的敏感性均超过 80%。

ELSEWHERE 其他地方

- **AAPL -1%** as Loop downgraded to Hold, now seeing the ~10% Sep/Dec iPhone shipment cuts (~13M units) as increasingly demand-driven and unlikely to be recovered in 2027, with rising memory costs a gross-margin risk. That cuts at bulls who think weaker September was a supply problem rather than a demand problem with units deferred, not lost. Memory costs are hitting Android too: DIGITIMES reports Samsung cut its 2027 Galaxy A OLED shipment target 17%, to ~100M units.

  > AAPL 下跌 1%，因 Loop 将其评级下调至“持有”，目前认为 9 月/12 月季度 iPhone 出货量削减 ~10%（约 1300 万部）日益受到需求驱动，且不太可能在 2027 年恢复，同时内存成本上升构成毛利率风险。这打击了多头方的观点，即他们认为 9 月份的疲软是供应问题而非需求问题，且出货量只是推迟而非流失。内存成本也在冲击安卓阵营：据 DIGITIMES 报道，三星将其 2027 年 Galaxy A 系列 OLED 出货目标下调了 17%，至 ~1 亿部。

- **TSLA +2%** into tomorrow night's print, with a Reuters report that its push for EU FSD approval is gaining traction making the rounds; Reuters also reported SPCX investors are pressing Musk on a potential TSLA merger ahead of SPCX's results tonight, which piggy backs on the Barclays report from earlier in the week

  > TSLA 在明晚财报公布前上涨 2%，路透社关于其推动欧盟 FSD 审批获得进展的报道正在流传；路透社还报道称，SPCX 投资者在今晚 SPCX 公布业绩前，正就潜在的 TSLA 合并事宜向马斯克施压，这与本周早些时候巴克莱银行的报告不谋而合。

- Solar bounced alongside small caps: **RUN +9.9%; ENPH +4.2%; FSLR +1.7%**, no company news. RUN had hit a 52-week low yesterday after JPM's PT cut.

  > 太阳能板块随小盘股一同反弹：RUN +9.9%；ENPH +4.2%；FSLR +1.7%，无公司层面消息。RUN 在摩根大通下调目标价后，于昨日触及 52 周低点。

- **CRCL +5.3%** as CRCL and Proof debuted verified-identity USDC payments for AI agents at Money20/20.

  > CRCL +5.3%，CRCL 与 Proof 在 Money20/20 大会上首次推出了针对 AI 代理的身份验证 USDC 支付功能。
