Good afternoon. **QQQs +1.1%** opened +65bps and grinded higher most of the day, moving higher near the close when Treasury authorized the offloading of cargo involving some blocked vessels.

下午好。纳指 100 ETF (QQQs) 收涨 1.1%，开盘上涨 65 个基点，全天大部分时间震荡走高，并在收盘前因财政部授权卸载涉及部分受阻船只的货物而进一步拉升。

Semis +2.2% outperformed as SPCX's guide, SMCI's preannouncement, and some bullish Anthropic comments by Gerstner on CNBC had semi vibes feeling better than they have been over the past couple weeks. **Software +1.8%** was led by cyber on an AI-found PHP flaw (**ZS +8%; OKTA +7.5%; CRWD +5.3%; S +3.5%**). **Internet -1%** as travel lagged (**EXPE -5%; BKNG -3.4%**) ahead of META's print (Zuck talking up Muse on the call) as the Consumer Agentic Winners vs Losers basket was up 5%. China internet lower again (**BABA -4%; PDD -3.6%; JD -3.6%**) as the HS Tech closed below 4,000 for the first time since Oct 2024. Telcos were also weaker after AT&T missed on phone adds (**T -6.4%; TMUS -2.5%; VZ -2%**), **NFLX -5.3%** on a weaker set of numbers and **GOOGL -1.6%** on mixed Cleveland's checks.

半导体板块上涨 2.2%，表现优于大盘，主要受 SPCX 的业绩指引、SMCI 的预盈公告以及 Gerstner 在 CNBC 上针对 Anthropic 发表的看多言论影响，使半导体板块的情绪较过去几周有所好转。软件板块上涨 1.8%，其中网络安全股因 AI 发现的 PHP 漏洞领涨（ZS +8%；OKTA +7.5%；CRWD +5.3%；S +3.5%）。互联网板块下跌 1%，旅游股在 META 财报发布前表现滞后（EXPE -5%；BKNG -3.4%），尽管扎克伯格在电话会议上大谈 Muse，且"消费者代理型 AI 赢家 vs 输家"组合上涨了 5%。中国互联网股再次走低（BABA -4%；PDD -3.6%；JD -3.6%），恒生科技指数自 2024 年 10 月以来首次收于 4,000 点下方。电信板块同样走弱，此前 AT&T 的新增手机用户数未达预期（T -6.4%；TMUS -2.5%；VZ -2%），NFLX 因业绩数据疲软下跌 5.3%，GOOGL 则因克利夫兰研究中心（Cleveland Research）的调研结果喜忧参半而下跌 1.6%。

On positioning, GS had some good color from their Prime team today saying short leverage near 5-year highs (99th percentile) with short sales outpacing long buys ~5 to 1 MTD, also saying the last two weeks were the largest net selling of Global Info Tech on record and Global AI stocks' long/short ratio in the 6th percentile vs. the past year with Mag 7 net exposure at a new record high.

仓位方面，高盛（GS）的主经纪商（Prime）团队今天提供了一些不错的分析，称空头杠杆接近 5 年高点（处于 99 百分位），本月至今空头抛售与多头买入之比为 ~5:1；此外还提到，过去两周全球信息技术板块出现了有记录以来最大的净抛售，全球 AI 概念股的多空比处于过去一年的 6% 分位，而"美股七巨头"（Mag 7）的净敞口则创下历史新高。

We sent out first takes on META, TXN, IBM, and LRCX here.

我们在此发布了对 META、TXN、IBM 和 LRCX 的初步解读。

In macro land, rates took a soft 20-year auction in stride and the **10Y was little changed at ~5.12%**. Odds of a 10/28 hike are ~15% (~13% yesterday), with December still priced for a hike. Crude gave back an early ~1.5% pop on Hormuz mine headlines, and late in the day the State Dept said reports it would order evacuations of some Gulf embassy staff were inaccurate, with its directive limited to non-emergency staff in Saudi Arabia. **BTC ~$84.5K**, +3% to its highest since 10/14.

宏观层面，利率市场从容应对了疲软的 20 年期国债拍卖，10 年期国债收益率基本持平于 ~5.12%。10 月 28 日加息的概率为 ~15%（昨日约为 13%），市场仍定价 12 月会加息。原油价格回吐了早前因霍尔木兹海峡水雷消息而出现的 ~1.5% 涨幅；随后美国国务院表示，有关其将下令撤离部分海湾地区使馆工作人员的报道不准确，其指令仅限于驻沙特阿拉伯的非紧急工作人员。比特币报 ~8.45 万美元，上涨 3%，创下 10 月 14 日以来的最高水平。

Let's get to the good stuff...

让我们进入正题......

- **Anthropic:** Altimeter's Brad Gerstner (an Anthropic investor) on CNBC's Squawk Box this morning here. Asked whether the IPO goes at $2T or $1.5T, he put last week's investor-day sentiment at "like a ten out of ten," then: "The numbers that we have in the Altimeter forecast for this for next year, let's call it 140 or $150 billion in GAAP revenue right for next year... If you apply a 10 times multiple to that, Andrew, you get to 1.5 trillion. If you apply 12 times multiple, you get closer to 2 trillion. So I think that's the range that we're talking about." The math works off the $150B end (12x is ~$1.8T). This is roughly in line with his Oct 15th framing of $100B 2026 exit run rate doubling would be "like $200B ARR exit next year." Some context on what that implies and what we're hearing buyside is modeling:

  Anthropic：Altimeter 的 Brad Gerstner（Anthropic 的投资者）今天早上参加了 CNBC 的 Squawk Box 节目（链接见此）。在被问及 IPO 估值是 2 万亿美元还是 1.5 万亿美元时，他表示上周投资者日的情绪"大约是 10 分（满分 10 分）"，随后说道："在 Altimeter 对明年的预测中，我们暂且称明年的 GAAP 营收为 1400 亿或 1500 亿美元......Andrew，如果你对其应用 10 倍的乘数，估值就是 1.5 万亿。如果应用 12 倍的乘数，估值就接近 2 万亿。所以我认为这就是我们讨论的范围。"这一计算是基于 1500 亿美元的高端数据（12 倍即 ~1.8 万亿美元）。这与他在 10 月 15 日提出的框架大致相符，即 2026 年 1000 亿美元的退出运行率翻倍将达到"明年约 2000 亿美元的 ARR 退出水平"。以下是关于这意味着什么以及我们听到的买方建模情况的一些背景：

  - The $140/$150 # is 2027 GAAP revenue, not ARR, and 2.6-2.8x ~$54B of 2026 revenue. To put these numbers into context: From an assumed~$90B of end-2026 ARR (what we model right now), getting there takes ~$7.8-9.4B of new ARR a month (equal monthly adds), for ~$180-198B of ARR by Dec-27. That's back to 1H26's ~$8B of new ARR a month, vs. ~$2-3B a month in Aug/Sep (~$5.4B ex one-offs). Right now, we model $132B of 2027 revenue ($167B of Dec-27 ARR), so he's ~6-15% above us. Something closer to a $100B exit ARR would make the math a lot easier.

    140/150 美元的数字是 2027 年的 GAAP 营收，而非 ARR（年度经常性收入），是 ~2026 年 540 亿美元营收的 2.6-2.8 倍。为了便于理解这些数字：从假设的 2026 年底约 900 亿美元 ARR（我们目前的模型预测）来看，要实现这一目标，每月需要新增 ~78-94 亿美元的 ARR（等额月度增长），到 2027 年 12 月 ARR 将达到 ~1800-1980 亿美元。这相当于回到了 2026 年上半年每月 ~80 亿美元的新增 ARR 水平，而 8/9 月每月仅为 ~20-30 亿美元（剔除一次性项目后约为 54 亿美元）。目前，我们预测 2027 年营收为 1320 亿美元（2027 年 12 月 ARR 为 1670 亿美元），因此他的预测比我们高出 ~6-15%。如果 2026 年底的退出 ARR 接近 1000 亿美元，计算起来会容易得多。

  - Still asking around where buyside settling in for 2027 numbers, getting wide ranges anywhere from $115B to $200B (high end of Anthropic's Reuters reported plan from August — hopefully they do a better job at setting expectations once public). So let's call it ~$140B. Some speculated in Slack Gerstner doing his best to lower expects given sentiment although some said he could just as easily be pumping. Obviously no one has their model completely set given we haven't even received the S-1, which might come as soon as Friday.

    仍在向各方打听买方对 2027 年数据的预期，得到的范围很大，从 1150 亿美元到 2000 亿美元不等（后者是路透社 8 月报道的 Anthropic 计划的高端——希望他们上市后在管理预期方面能做得更好）。所以我们暂且称之为 ~1400 亿美元。Slack 上有人推测，考虑到目前的情绪，Gerstner 正在尽力降低预期，尽管也有人说他同样可能是在拉抬股价。显然，由于我们甚至还没收到 S-1 文件（最早可能在周五发布），目前还没有人的模型是完全确定的。

- SPCX **+8%** with a much better set of numbers for investors to chew on, even though I didn't hear many believe the 13GW # Elon threw out.

  SPCX +8%，尽管我没听到多少人相信马斯克抛出的 13GW 这一数字，但其公布的一系列数据确实好得多，足以让投资者细细品味。

Sell-side was largely positive in their recaps. Piper said it and peers had been "grossly mis-modeling" SPCX. JPM more than doubled its 2027-28 numbers, modeling 10GW of compute exiting 2027 and $254B of 2027 revenue (~$400B of exit ARR vs. Musk's $500B-$1T), and MS took FY27 revenue to $178B from $113B while modeling 8.3GW vs. Musk's ~13GW.

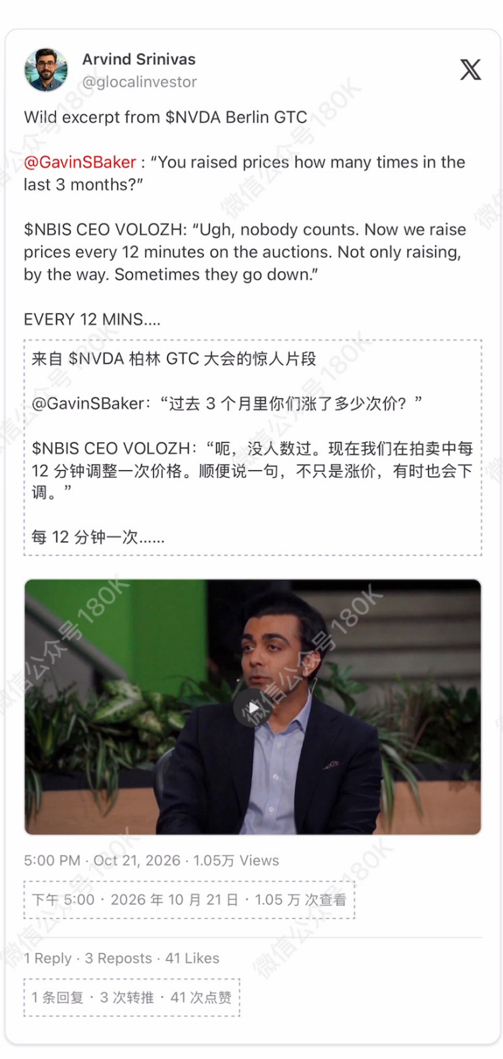
卖方在总结报告中大多持积极态度。Piper 表示，该公司及同行此前对 SPCX 的建模存在"严重错误"。摩根大通（JPM）将其 2027-28 年的数据翻了一倍多，预计 2027 年底算力将达到 10GW，2027 年营收将达到 2540 亿美元（退出时的年经常性收入 ARR 约为 4000 亿美元，而马斯克的预期为 5000 亿至 1 万亿美元）；摩根士丹利（MS）将 2027 财年营收预期从 1130 亿美元上调至 1780 亿美元，同时建模算力为 8.3GW，而马斯克的预期为 ~13GW。

- **NVDA +2.5%** feeling the 13GW love, outperforming the SOX as Jensen was at GTC Berlin saying sounding bullish as always, saying AI infrastructure demand remains structurally strong (agents + physical AI + industry-wide adoption), Europe is a real incremental growth market rather than a lagging one, and the economics of the factories themselves are improving via faster deployment and longer asset life.. NVDA and **AMKR +4.9%** plan a >300% expansion in advanced-packaging capacity, and NVDA expects 2027 test capacity at 2x 2026 (**TER +2.6%; AEHR +3%**).

  NVDA +2.5%，受到 13GW 的利好提振，表现优于 SOX 指数。黄仁勋在柏林 GTC 大会上发言，一如既往地表现出看涨态度，称 AI 基础设施需求在结构上依然强劲（智能体 + 物理 AI + 全行业采用），欧洲是一个真正的增量增长市场而非滞后市场，且工厂本身的经济效益正通过更快的部署和更长的资产寿命得到改善。NVDA 与 AMKR（+4.9%）计划将先进封装产能扩大 300% 以上，且 NVDA 预计 2027 年的测试产能将达到 2026 年的 2 倍（TER +2.6%；AEHR +3%）。

- Miners outperformed while the neoclouds underperformed as investors digested what the SPCX print meant for the space: **GLXY +7.4%; WULF +6.2%; IREN +4.6%; HUT +3.7%** vs. **CRWV -50bps; NBIS +7bps** (lows of -4.5%/-4.3%). NBIS at GTC berlin saying it plans >1GW of Vera Rubin capacity next year and CEO Volozh telling Gavin Baker at GTC Berlin that "now we raise prices every 12 minutes on the auctions. Not only raising, by the way. Sometimes they go down,"

  矿商股表现优于大盘，而新型云服务商（neoclouds）表现不佳，投资者正在消化 SPCX 数据对该领域的影响：GLXY +7.4%；WULF +6.2%；IREN +4.6%；HUT +3.7%，相比之下 CRWV -50bps；NBIS +7bps（盘中低点曾达 -4.5%/-4.3%）。NBIS 在柏林 GTC 大会上表示，计划明年实现超过 1GW 的 Vera Rubin 产能；CEO Volozh 在柏林 GTC 大会上告诉 Gavin Baker："现在我们在拍卖中每 12 分钟调整一次价格。顺便说一句，不只是涨价，有时也会下调。"



Arvind Srinivas
@glocalinvestor

Wild excerpt from $NVDA Berlin GTC

@GavinSBaker : "You raised prices how many times in the last 3 months?"

$NBIS CEO VOLOZH: "Ugh, nobody counts. Now we raise prices every 12 minutes on the auctions. Not only raising, by the way. Sometimes they go down."

EVERY 12 MINS....

来自 $NVDA 柏林 GTC 大会的惊人片段

@GavinSBaker："过去 3 个月里你们涨了多少次价？"

$NBIS CEO VOLOZH："呃，没人数过。现在我们在拍卖中每 12 分钟调整一次价格。顺便说一句，不只是涨价，有时也会下调。"

每 12 分钟一次......

Good discussion in TMTB Slack here on whether SPCX's supply helps or hurts the neos. *Arun Dhar* boiled the neo bull case down to two things: Musk's revenue math implies $40-80B per GW (spot down 20% or up 80% from here), and his debt raise doesn't worsen unsecured financing for everyone else, though *"the more Neos expose themselves to spot pricing, the harder it is to lend to them." bretzel* pushed back that *"Spcx doesnt set the pricing, demand does,"* noting GOOGL, one of SPCX's two biggest customers, called its deal a *"temporary bridge": "Who is the buyer at $50/w then?"*

TMTB Slack 上关于 SPCX 的供应对新进入者（neos）是有利还是有弊展开了精彩讨论。Arun Dhar 将看好新进入者的理由归结为两点：马斯克的营收计算意味着每 GW 产生 400-800 亿美元（现货价格较目前下降 20% 或上涨 80%），且他的债务融资不会恶化其他人的无抵押融资环境，尽管"新进入者越是暴露在现货定价之下，就越难向其提供贷款"。bretzel 反驳称"定价不是由 Spcx 决定的，而是由需求决定的"，并指出 SPCX 的两大客户之一 GOOGL 将其交易称为"临时桥梁"："那么到时谁会以 50 美元/瓦的价格买单呢？"

- Memory/HDDs mixed : **STX +3.2%; WDC +3.9%; MU +2%; SKHY +2.5%; SNDK +94bps**. Only thing we heard here was a similar sentiment to what MK said in *Slack: "If Elon is able to add this much capacity then it suggests the market isn't as tight as we think."* We get WDC tomorrow, which should be a good tea leaf for how the rest of the space reacts this earnings season.

  存储/硬盘驱动器（HDD）板块涨跌互现：STX +3.2%；WDC +3.9%；MU +2%；SKHY +2.5%；SNDK +94 个基点。我们在这里听到的唯一观点与 MK 在 Slack 中表达的类似："如果埃隆能够增加这么多产能，说明市场并不像我们想象的那么紧俏。"明天我们将迎来 WDC 的财报，这应该是观察该行业其他公司在本财季表现的一个重要风向标。

- **AMD +3.4%** as Evercore's checks with 20+ AI engineers found agentic fan-out pushing server CPU:GPU ratios from one per 2-4 GPUs toward 1:1, with CPU ASPs up 10-15% q/q in 1H26 and seen up 15-20% in 2H26 (one expert models 20-25% through 2027 until CoWoS eases in 1Q27). Evercore also has **ARM +2.5%** capturing about half of new hyperscale CPU deployments.

  AMD 上涨 3.4%，Evercore 对 20 多名 AI 工程师的调研发现，代理式扇出（agentic fan-out）正推动服务器 CPU 与 GPU 的配比从每 2-4 颗 GPU 配一颗 CPU 趋向 1:1，预计 2026 年上半年 CPU 平均售价（ASP）环比上涨 10-15%，下半年上涨 15-20%（一位专家预测到 2027 年涨幅将达 20-25%，直到 2027 年第一季度 CoWoS 产能缓解）。Evercore 还指出 ARM（+2.5%）占据了约一半的新型超大规模云服务商（hyperscale）CPU 部署份额。

- **AMBA +4.4%** spiked as much as +9.7% on a Betaville alert that NVDA may be a bidder before fading; *Tae Kim* in TMTB Slack: *"when was the last time betaville nailed anything? 0 for last 100."*

  AMBA 上涨 4.4%，受 Betaville 警报称 NVDA 可能是竞购者的影响，盘中一度飙升 9.7%，随后涨幅收窄；TMTB Slack 的 Tae Kim 评论道："Betaville 上次预测准是什么时候？最近 100 次里没中过一次。"

INTERNET 互联网

- **NFLX -5.3%** (opened -6.6%) on the ads reset with Q4 rev guide below both street and buyside expects. Needham downgraded to Hold, while MS says the ad delays are "months not years." Not a lot of pushback on the weaker numbers today — the thing I heard cited the most was both bears and bulls questioning how much downside there is left. Bears also thinking that initial CY27 guide will come in lower than LDD street expects and saying street's ~$5.2-5.3B FY27 ad # requires near-doubling from a lower base, while the current ad tier still earns less per member than the standard ad-free tier. Bulls will say subscription demand and pricing remain resilient despite weaker engagement trends.

  NFLX -5.3%（开盘 -6.6%），主因广告业务调整，且第四季度营收指引低于华尔街和买方预期。Needham 将其评级下调至"持有"，而摩根士丹利（MS）表示广告业务的延迟是"以月计而非以年计"。今天对疲软数据的反驳并不多——我听到最多的说法是，无论看空者还是看多者都在质疑还有多少下跌空间。看空者还认为，最初的 2027 历年指引将低于华尔街预期的低双位数（LDD），并表示华尔街对 2027 财年 ~$52 亿-53 亿的广告收入预测要求在较低基数上实现近乎翻倍，而目前的广告版套餐每会员收益仍低于标准无广告套餐。看多者则会认为，尽管参与度趋势走弱，但订阅需求和定价能力依然保持韧性。

- **META** solid print post-close (+5% AH). During the day, couple things to flag: · Reuters reported a New Mexico jury ordered META to pay $25B over privacy claims, Semafor reported at ~3:17pm that META plans nonvoting shares and more stock sales to fund AI (confirmed in the PR) and Anthropic opened a research preview of Claude Duet, a proactive agent app.

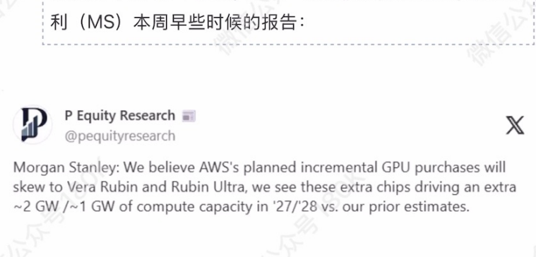
  META 盘后财报表现强劲（盘后上涨 5%）。日内有几点值得关注：· 路透社报道，新墨西哥州陪审团因隐私指控判处 META 支付 250 亿美元；Semafor 在下午 3:17 报道称，META 计划发行无投票权股份并进行更多股票销售以资助 AI 业务（已在公关稿中确认）；Anthropic 开启了 Claude Duet 的研究预览，这是一款主动型智能体应用。

- **GOOGL -1.6%** (low -2.9%) on Cleveland's checks: Q3 trends slower at quarter-end on mixed retail and softer ROI, with a lower 2027 ad outlook on reduced enthusiasm for the LLM monetization ramp. Mizuho, still positive on TPUs, cut its multiple to 23x from 30x on search risk which goes at the current push and pull between bulls and bears: cloud vs. search and what multiple you pay for the whole co. if search begins decel'ing close to LDD in the next few quarters on tougher comps. Remember, search is still majority of profits and carry much higher margins than cloud so a mix shift here faces uphill battle. EPS next Wednesday. Positioning/Sentiment the most mixed out of the 4 hyperscalers as name has been used as funding short.

  GOOGL 下跌 1.6%（低点下跌 2.9%），受 Cleveland 调研报告影响：由于零售业表现参差不齐且投资回报率（ROI）疲软，第三季度趋势在季末放缓，同时因对 LLM 货币化增长的热情降低，下调了 2027 年广告业务展望。瑞穗证券（Mizuho）仍看好 TPU，但考虑到搜索业务风险，将其估值倍数从 30 倍下调至 23 倍，这正触及了目前多空博弈的核心：云计算与搜索业务的博弈，以及如果搜索业务因基数较高而在未来几个季度减速至低双位数（LDD）增长，你应该为整个公司支付多少倍的估值。请记住，搜索业务仍贡献了大部分利润，且利润率远高于云计算，因此这里的结构性转变面临巨大挑战。下周三公布每股收益（EPS）。在四大超大规模云服务商中，该股的仓位/情绪最为复杂，因为该标的已被用作空头融资工具。

- **AMZN -10bps.** Snippet from MS' note earlier in the week we missed:

  AMZN 下跌 10 个基点。摘录一段我们之前遗漏的摩根士丹利（MS）本周早些时候的报告：



P Equity Research
@pequityresearch

Morgan Stanley: We believe AWS's planned incremental GPU purchases will skew to Vera Rubin and Rubin Ultra, we see these extra chips driving an extra ~2 GW /~1 GW of compute capacity in '27/28 vs. our prior estimates.

- **SPOT -14bps** opened -3% on the NFLX read through before recovering into tomorrow morning's print. The glass half full read: If SPOT can thread the needle on the Q4 GM guide, then SPOT could become one of the large cap non AI supply chain stocks as NFLX remains in funding short camp.

  SPOT 下跌 14 个基点，受 NFLX 业绩解读影响开盘下跌 3%，随后在明早财报公布前有所回升。乐观的解读是：如果 SPOT 能在第四季度毛利率（GM）指引上表现出色，那么随着 NFLX 仍处于资金流出阵营，SPOT 可能会成为大盘股中非 AI 供应链的标的之一。

- Travel sold off a day after outperforming on Jefferies's better checks: **EXPE -5%; BKNG -3.4%; ABNB -1.8%.** My guess is maybe some selling ahead of the META print as investors remain concerned on the the agent overhang: a check we heard found LLMs send NYC hotel searches to branded results 87% of the time vs. 41% on Google, with brand-direct links at 97% vs. 13%.

  旅游板块在因杰富瑞（Jefferies）乐观调研数据而走强一天后遭到抛售：EXPE 下跌 5%；BKNG 下跌 3.4%；ABNB 下跌 1.8%。我的猜测是，由于投资者仍担心 AI 智能体（agent）带来的负面影响，可能在 META 财报公布前出现了一些抛售：我们听到的一项调研发现，LLMs 将纽约市酒店搜索引导至品牌结果的比例为 87%，而 Google 仅为 41%；品牌直连链接的比例为 97%，而 Google 仅为 13%。

- **SE -3.1%** extended Tuesday's -9% on Forrest Li's memo, with the open-ended Sea Cloud capex and a possible Monee IPO the overhangs as investors hesitant to add into the print despite all the negativity.

  SE 下跌 3.1%，延续了周二因李小冬（Forrest Li）内部信导致的 9% 跌幅，Sea Cloud 无上限的资本支出以及 Monee 可能的 IPO 成为悬而未决的压力，尽管负面情绪笼罩，投资者在财报公布前仍犹豫是否加仓。

SOFTWARE 软件

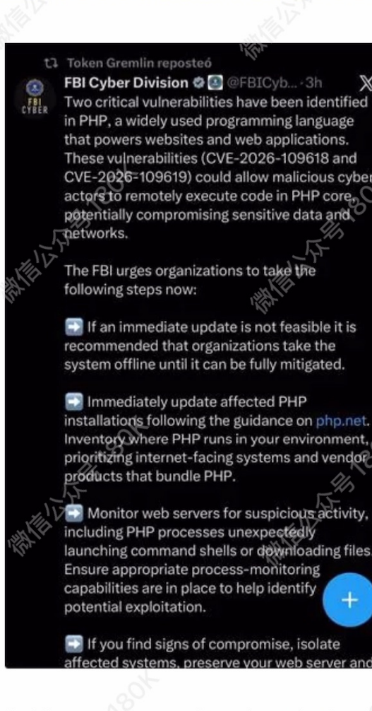
- Cyber ripped on critical vulnerabilities identified in PHP: **ZS +7.8%; OKTA +7.5%; CRWD +5.3%; NET +5% S +3.5%; PANW +2%; FTNT +1.8%.** Two critical PHP flaws let attackers run code remotely without logging in; they were found with AI, OpenAI called it one of the most impactful vulnerabilities in recent memory, and the WSJ said AI had found a bug putting up to 70% of the world's websites at risk. The ELI5 for all us non-technical folks via Claude:

  由于 PHP 发现严重漏洞，网络安全板块大幅走高：ZS +7.8%；OKTA +7.5%；CRWD +5.3%；NET +5%；S +3.5%；PANW +2%；FTNT +1.8%。两个 PHP 严重漏洞允许攻击者在无需登录的情况下远程运行代码；这些漏洞是通过 AI 发现的，OpenAI 称其为近年来影响最大的漏洞之一，《华尔街日报》表示，AI 发现的这一漏洞使全球高达 70% 的网站面临风险。以下是 Claude 为我们这些非技术人员提供的通俗解释：

  > *PHP is the behind-the-scenes software that builds a web page each time you load it (your login screen, your shopping cart). It runs about 70% of websites, and the flaw is in PHP itself, not in any one company's code, so even a well-built site is exposed. A stranger can send a specially crafted request, with no password, and get the website's computer to run their commands, letting them take it over, steal data, or deface the site.*
  >
  > *PHP 是一种幕后软件，每当你加载网页（如登录界面、购物车）时，它都会负责构建页面。全球约 70% 的网站都在运行 PHP，而该漏洞存在于 PHP 本身，而非某家公司的代码中，因此即使是架构良好的网站也会暴露在风险之下。陌生人可以发送一个特制的请求，无需密码，即可让网站的计算机运行其指令，从而接管网站、窃取数据或篡改页面。*

  The FBI's Cyber Division told organizations that can't patch to take systems offline:

  联邦调查局（FBI）网络部告知无法打补丁的机构将系统离线：



Token Gremlin reposted

FBI Cyber Division @FBICyb... · 3h

Two critical vulnerabilities have been identified in PHP, a widely used programming language that powers websites and web applications. These vulnerabilities (CVE-2026-109618 and CVE-2026-109619) could allow malicious cyber actors to remotely execute code in PHP core, potentially compromising sensitive data and networks.

The FBI urges organizations to take the following steps now:

➡️ If an immediate update is not feasible it is recommended that organizations take the system offline until it can be fully mitigated.

➡️ Immediately update affected PHP installations following the guidance on php.net. Inventory where PHP runs in your environment, prioritizing internet-facing systems and vendor products that bundle PHP.

➡️ Monitor web servers for suspicious activity, including PHP processes unexpectedly launching command shells or downloading files. Ensure appropriate process-monitoring capabilities are in place to help identify potential exploitation.

➡️ If you find signs of compromise, isolate affected systems, preserve your web server and

More AI-driven attack news throughout the day: The Information reported hackers used Anthropic, SpaceX and Moonshot models to fully automate attacks on 400+ LatAm financial institutions, and MSFT said a China-aligned group used an AI framework to get privileged cloud access in under three hours. Evercore called out the PHP winners: web firewalls (AKAM, FSLY, NET), exposure management (TENB, QLYS, RPD) and endpoint (PANW, S).

全天有更多 AI 驱动的攻击消息：据 The Information 报道，黑客利用 Anthropic、SpaceX 和月之暗面（Moonshot）的模型，实现了对 400 多家拉美金融机构攻击的全自动化；微软表示，一个与中国有关联的团体利用 AI 框架在不到三小时内获得了云端的特权访问权限。Evercore 点名了 PHP（私有混合平台）的赢家：Web 防火墙（AKAM、FSLY、NET）、暴露管理（TENB、QLYS、RPD）和端点安全（PANW、S）。

- Consumption stronger all day though didn't hear any great reasons why other than the AI outperformance in general: **DDOG +6.5%; MDB +6.7%** with **SNOW +98bps** leading the rear. Didn't hear much on the SNOW weakness: ISI was positive on CoCo checks, but also said spending controls are becoming more common and flagged the tougher comps heading into next year.

  消费板块全天走势较强，尽管除了 AI 板块整体表现优异外，没听到什么特别好的理由：DDOG 上涨 6.5%；MDB 上涨 6.7%，SNOW 上涨 98 个基点垫底。关于 SNOW 的疲软没听到太多消息：ISI 对 CoCo（消费控制）检查持积极态度，但也表示支出控制正变得越来越普遍，并指出明年将面临更严峻的同比基数压力。

- **ZM +2%** after its investor day set FY30 targets of 6-8% revenue growth (vs. ~4% consensus) and a ~40% operating margin (from 33-36%); Oppenheimer upgraded to Outperform saying they are gaining confidence in "its transition from video meetings to a broader AI communications and workflow platform."

  ZM 上涨 2%，此前其投资者日设定了 2030 财年营收增长 6-8% 的目标（市场预期为 ~4%），以及 ~40% 的营业利润率（目前为 33-36%）；Oppenheimer 将其评级上调至"跑赢大盘"，称对其"从视频会议向更广泛的 AI 通信和工作流平台转型"的信心正在增强。

- **DOCN +2%** gave back most of a premarket pop on Piper's upgrade (AI accelerating ARR, financing concerns overdone).

  DOCN 上涨 2%，在 Piper 上调评级（AI 加速年度经常性收入 ARR，融资担忧被过度放大）后，回吐了盘前的大部分涨幅。[[source_end]]

- **CRM -27bps** digested the $5.66B BRZE deal (58% premium). Wolfe called the deal a strategic necessity but flagged near term Marketing cloud confusion the key risk. Wolfe also flagged **ADBE -65bps**'s Marketing Cloud share at risk and modestly positive for **TWLO +3.1%**.

  CRM -27bps，市场已消化其以 56.6 亿美元收购 BRZE 的交易（溢价 58%）。Wolfe 称该交易是战略必然，但指出短期内营销云（Marketing Cloud）的混乱是主要风险。Wolfe 还指出 ADBE -65bps 的营销云份额面临风险，并对 TWLO +3.1% 持适度乐观态度。

ELSEWHERE 其他地方

- **T -6.4%** despite beats on revenue, EPS and FCF: postpaid phone adds of 379K missed ~387K (405K a year ago) even with iPhone 18 promos, fiber ARPU fell 4%, and management flagged higher Q4 marketing and acquisition costs from an extended device launch cycle. The bar we heard was an EBITDA guide signaling >4% growth (Street ~3.9%) in a crowded name. Peers fell in sympathy (**TMUS -2.5%; VZ -2.2%; CHTR -2.5%; CMCSA -1.3%**) as T added a record 769K fiber and FWA subs.

  T -6.4%，尽管营收、EPS 和 FCF 均超预期：后付费手机用户新增 37.9 万，低于预期的 ~38.7 万（去年同期为 40.5 万），即便有 iPhone 18 促销活动也未能达标；光纤 ARPU 下跌 4%，且管理层指出由于设备发布周期延长，第四季度营销和获客成本将上升。我们听到的预期是 EBITDA 指引需显示 >4% 的增长（华尔街预期为 ~3.9%），而该股筹码过于拥挤。由于 T 的光纤和 FWA 用户新增创纪录的 76.9 万，同行股价受累下跌（TMUS -2.5%；VZ -2.2%；CHTR -2.5%；CMCSA -1.3%）。

- **TSLA +3.4%** into the print tonight as Elon said they had formed a committee to evaluate a SPCX/TSLA merger.

  TSLA +3.4%，今晚将发布财报，埃隆表示他们已成立委员会评估 SPCX 与 TSLA 的合并事宜。

- **DELL +5.3%; HPE +3.7%** in sympathy with SMCI; JPM called DELL out directly as a beneficiary of easing power and financing constraints after SPCX's guide, and both are partners on NVDA's DSX POD.

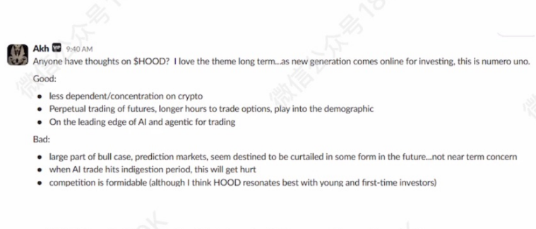
  DELL +5.3%；HPE +3.7%，受 SMCI 带动上涨；摩根大通直接点名 DELL 是 SPCX 发布指引后电力和融资约束缓解的受益者，且两者均为 NVDA DSX POD 的合作伙伴。

- **MBLY -3.8%** as RBC downgraded to Underperform, arguing carmakers' move to central computers (NVDA, QCOM) puts its driver-assist business at risk, along with VW concentration and no new wins.

  MBLY -3.8%，因加拿大皇家银行（RBC）将其评级下调至"跑输大盘"，理由是汽车制造商向中央计算（NVDA、QCOM）的转型使其驾驶辅助业务面临风险，此外还存在大众汽车（VW）客户集中度过高且无新订单的问题。

- **COIN +3.6%; HOOD +3.8%; CRCL +4.5%** with BTC +3%. Rosenblatt initiated HOOD at Buy, and Mizuho's survey of 600+ HOOD users had ~94% likely to trade single-stock perps, 84% funding them mostly or entirely with new money. Some good discussion on the bull vs bear case in Slack's idea-dinner channel here:

  COIN +3.6%；HOOD +3.8%；CRCL +4.5%，BTC 上涨 3%。Rosenblatt 对 HOOD 给予"买入"初始评级；瑞穗对 600 多名 HOOD 用户的调查显示，~94% 的用户可能会交易个股永续合约，84% 的用户主要或全部使用新资金为其注资。Slack 的 idea-dinner 频道中关于看涨与看跌观点的精彩讨论如下：



Akh 9:40 AM

Anyone have thoughts on $HOOD? I love the theme long term...as new generation comes online for investing, this is numero uno.

Good:

- less dependent/concentration on crypto
- Perpetual trading of futures, longer hours to trade options, play into the demographic
- On the leading edge of AI and agentic for trading

Bad:

- large part of bull case, prediction markets, seem destined to be curtailed in some form in the future...not near term concern
- when AI trade hits indigestion period, this will get hurt
- competition is formidable (although I think HOOD resonates best with young and first-time investors)

- **AAPL +1.3%** into Friday's iPhone Duo launch.

  AAPL +1.3%，迎接周五的 iPhone Duo 发布。
